1. GENERAL

SCOPE

The light transmitting unit is a standard-packaged product with connector and opto-electric component packaged with LED and drive IC. The function of unit changes the electric signal into light signal and be transmitted by plastic fiber.

This unit is operated at single +3.3V ~ +5V and the input signal is TTL compatible. The module has a maximum operating speed of 13.2 Mbps. The light signal is coupled into plastic fiber by connector. This unit has high performance at low dissipation current, steady light output and efficient light coupling.

MATED PLUG

The mated plug should complied with standard EIAJ-5720B

2. ABSOLUTE MAXIMUM RATING

Parameters	Symbol	Rating	Unit
Supply Voltage	V_{CC}	-0.5~+7.0	V
Input Voltage	V_{IN}	-0.5~ $V_{CC}+0.5$	V
Operating Temperature	T_{opr}	-20~+70	°C
Storage Temperature	T_{stg}	-40~+70	°C
ElectroStatic Damage	ESD	3.5	KV
Soldering Temperature	T_{sol}	260	°C

Soldering Time \leq 10 Seconds

3. RECOMMENDED OPERATING CONDITION

Parameters	Symbol	MIN.	TYP.	MAX.	Unit
Supply Voltage	V_{CC}	2.7		5.5	V
High Level Input Voltage	V_{IH}	2.0			V
Low Level Input Voltage	V_{IL}			0.8	V

APPLICATION NOTE:

1.

2. The total line resistance of power line (from V_{cc} to B) and ground line (from GND to A) should not too high as to reduce the bias voltage across the transmitter (between B & A) that cause the module fail.
3. Please be noted that attenuation due to layout should not cause the V_{IN} too worse.
